## 1. Introduction

This report presents the development of my personal Computer Science Portfolio created for the B201A Computer Science Lab module. The portfolio showcases my technical skills, programming projects, GitHub repository, curriculum vitae (CV), and academic achievements.

The portfolio has been designed to provide a professional online presence while demonstrating practical knowledge of software development, version control, and web technologies.

## 2. Portfolio Website

The portfolio website was developed using HTML, CSS and JavaScript and is hosted using GitHub Pages.

The website contains the following sections:

- Home
- About Me
- Skills
- Technical Artefacts
- Education
- Contact
- Curriculum Vitae (CV)

The layout follows a clean and responsive design, allowing users to access the website from desktop and mobile devices.

## 3. GitHub Repository

The GitHub repository stores all source files related to the portfolio, including the website, technical artefacts, CV and report.

### GitHub Repository

<https://github.com/tahasin71/My-Portfolio>

### Portfolio Website

<https://tahasin71.github.io/My-Portfolio>

The repository is organised into folders to improve readability and simplify future development.

## 4. Technical Artefacts

### 4.1 Python Algorithms

The Python Algorithms project demonstrates my understanding of algorithm design using Python.

Currently implemented:

- Bubble Sort

Future versions of this project will include:

- Binary Search
- Linear Search
- Selection Sort
- Insertion Sort

The project demonstrates my understanding of loops, functions, lists and algorithm implementation.

## 5. Technologies Used

The following technologies were used during the development of this portfolio:

- HTML5
- CSS3
- JavaScript
- Python
- Git
- GitHub
- GitHub Pages
- LaTeX
- Visual Studio Code

## 6. Reflection

Throughout this project I improved my understanding of GitHub, web development, Python programming and LaTeX. I also learned how to organise software projects using Git and present technical work in a professional format.

### 6.1 Strengths

- Responsive portfolio website
- Well-organised GitHub repository
- Clean user interface
- Professional documentation
- Demonstrates programming skills

### 6.2 Limitations

- Limited number of technical artefacts at the current stage
- Additional projects can strengthen the portfolio
- More interactive website features could be added

## 7. Future Improvements

Future work will include expanding the Python Algorithms collection, adding networking and cybersecurity projects, improving website accessibility and including more advanced software development projects.

## 8. Conclusion

The Computer Science portfolio provides a professional overview of my academic progress, technical skills and programming experience. It demonstrates my ability to develop software, organise projects using GitHub and present technical work in a structured and professional manner.
